Sprint Review — Team L Sprint 1 Review

Sprint goals

My goal for Sprint 1 was to independently build and verify the backend CRUD functionality and establish the authentication groundwork for the Final Project. I focused on creating stable endpoints for menu item management, user account creation, and database connectivity. By the end of the sprint, I successfully validated all CRUD operations in Swagger UI and implemented a working JWT-based authentication system.

<u>Backend CRUD Setup and Authentication Groundwork</u>

- Key result 1 - I successfully implemented and tested all CRUD endpoints for menu items in FastAPI, verifying each operation (POST, GET, PUT, DELETE) through Swagger UI with 200 OK and 204 No Content responses.
- Key result 2 - I configured the database connection and finalized the schema alignment between SQLAlchemy models and Pydantic schemas, ensuring consistent data storage and retrieval for menu items and users.
- Key result 3 - I developed and validated the authentication system using JWT tokens, completing both the Signup and Login endpoints and confirming secure token generation and user verification.

Demos

Demo	Feedback
Work item you are demoing	Questions and comments from the team
CRUD operations in Swagger UI  	All endpoints executed successfully; no errors

Login/Signup demo  	Token generated correctly; ready for security integration in Sprint 2

Database Integration Demo 	Data stored and retrieved successfully; schema aligned with Pydantic models

PUT /menu_items/{item_id} Update Menu Item

Parameters

Cancel

Reset

Name	Description
item_id * required integer (path)	1

Request body required

application/json

Edit Value | Schema

```
{
  "item_id": 1,
  "name": "Burger",
  "description": "Grilled beef patty with cheese",
  "price": 8.99,
  "category": "Entree"
}
```

Execute

Clear

Responses

Curl

```
curl -X 'PUT' \
  'http://127.0.0.1:8000/menu_items/1' \
  -H 'accept: application/json' \
  -H 'content-type: application/json' \
  -d '{
  "item_id": 1,
  "name": "Burger",
  "description": "Grilled beef patty with cheese",
  "price": 8.99,
  "category": "Entree"
}'
```

  ]
}
```

Complete tasks

During Sprint 1, I completed all backend CRUD endpoints for menu items and users. Each endpoint was tested and validated through Swagger UI with successful responses. I finalized the database schema and implemented the authentication system using JWT tokens. All work items met acceptance criteria and were marked “Done.” This sprint established full backend functionality and data persistence, providing a solid foundation for Sprint 2.

Upcoming

In Sprint 2, I will focus on enhancing security and connecting the backend to the frontend interface. Planned tasks include implementing role-based access control, integrating the login and signup flow with the frontend, adding pagination and filtering to GET /menu_items, and developing automated Pytest cases for endpoint validation. I will also begin preparing deployment documentation and presentation materials for the final project submission.
